Mahmoud AlEbrahim

Senior Flutter Developer | Software Engineer | Node.js and GraphQL Backends

Aleppo, Syria | +963 994 014 438 | ma453935@gmail.com
linkedin.com/in/mahmoud-alebrahim | github.com/Mahmoud-Al-Ebrahim | mahmoud-al-ebrahim.github.io

PROFESSIONAL SUMMARY

Senior Flutter Developer and software engineer with five years of professional Flutter experience, nearly three in senior and lead roles, and 11 apps shipped or contributed to on Google Play and the App Store (17 listings) across delivery, education, e-commerce, veterinary care and payments. Designs feature-first Clean Architecture codebases, reused across six production apps, and builds the Node.js, Express and MongoDB APIs and GraphQL data layers behind them. Recent work: real-time delivery over GraphQL subscriptions, offline-first EdTech with protected content, and on-device semantic search with TensorFlow Lite. Has taught 1,000+ students and mentored 20+ junior developers.

TECHNICAL SKILLS

Programming Languages: Dart, JavaScript (Node.js), SQL

Mobile Development: Flutter, Bloc/Cubit, HydratedBloc, Riverpod, GetX, Provider, go_router, Dio, Firebase, Google Maps, Hive, TensorFlow Lite, ML Kit, App Store and Google Play releases

Software Architecture & Design: Clean Architecture, SOLID, object-oriented programming, repository pattern, dependency injection (get_it, injectable), Either-based error handling (dartz, fpdart), offline-first design, MVC

Backend, APIs & Databases: Node.js, Express, REST API design, GraphQL, Hasura, JWT and role-based authorization, Socket.IO, SignalR, Firebase Cloud Messaging, MongoDB (Mongoose, aggregation pipelines, Atlas Search), Firestore

Testing & Quality: Unit, widget and integration testing, mockito, TDD, architecture-guard tests, code review, Sentry, Smartlook

Performance & Security: Dart isolates, pagination, caching and prefetch throttling, token refresh, secure storage, screenshot and emulator protection

DevOps & Tools: Git, GitLab CI/CD, Figma

PROFESSIONAL EXPERIENCE

Senior Flutter Developer, KwanX | Aleppo, Syria — Jan 2026 – Jul 2026

- Architected and delivered Labeeny, a real-time, multi-role delivery platform with separate customer and captain apps on Google Play and the App Store, built with Flutter and GraphQL on Hasura.
- Designed a feature-first Clean Architecture with SOLID boundaries and a data layer built on GraphQL subscriptions, caching, optimistic updates and structured error handling, keeping order status in sync across both apps.
- Set code-quality and delivery standards through Git workflows, code review, GitLab CI/CD pipelines and structured task planning.

Senior Flutter Developer, Prootech | Aleppo, Syria — Mar 2025 – Jan 2026

- Led the EdTech product line as team lead and mobile architect (Fahim BAC, Fahim Uni and Assas, plus core work on Atmtha): requirements, architecture, code review and releases on Google Play and the App Store.
- Built offline-first content delivery for students on unreliable networks: HydratedBloc persistence with version-gated cache invalidation, resumable HTTP Range downloads, and in-app PDF and streamed video.
- Designed a QR-code prepaid-access model in place of card payments: admins generate up to 1,000 activation codes per batch and print QR sheets in the app for physical sell centres.
- Implemented content protection: app-wide screenshot blocking, clock-rollback and emulator detection, server-side account blocking re-checked on reconnect, and a per-request device ID that stops code sharing (Atmtha).
- Built the order lifecycle, Socket.IO chat, community feed and seller dashboard of the Min Bayty marketplace, with optimistic per-item UI state and a generic pagination mixin.
- Standardized one architecture across six production codebases: Clean Architecture, get_it/injectable, go_router, Dio interceptors, typed API clients with multi-server routing, and Either-based error handling.

Flutter Team Leader, Ramaaz | Turkey — Oct 2023 – Dec 2024

- Led architecture and delivery of production eCommerce and delivery apps published on the App Store and Google Play.
- Led Flutter development of Trydos, a 90,000-line social-commerce super-app (441 Dart files, 76 use cases): boutique marketplace, WhatsApp-style chat, voice and video calls, product stories and AI image search.

- Designed a multi-backend HTTP layer: one generic typed client routes requests to market, chat, stories and search services with per-service tokens, locale and country headers.
- Implemented offline-first state with HydratedBloc for catalog, cart and chats, and a background-isolate push handler that routes call and chat events while the app is closed.
- Added Sentry error tracking, Smartlook session replay and request-timing analytics, and 19 integration-test scenarios covering core user flows.

Flutter Developer, Ulu | Syria — Mar 2023 – Oct 2023

- Delivered features for production food-delivery platforms, including real-time order updates and backend API integrations; improved the performance and stability of critical flows and supported store releases.

Flutter Trainee, 404 Developers | Syria — Nov 2021 – Mar 2023

- Built production-level mini applications with responsive, adaptive UI using Clean Architecture and test-driven development (TDD).

SELECTED PROJECTS AND PUBLISHED APPS

Birdy Consults | *Veterinary consultation platform | Google Play | Sole Flutter developer | 2025*

- Built subscription tiers (Silver, Gold, Diamond) driven by backend subscription state with consultation quotas; consultation chat with FCM-driven real-time updates and optimistic messages; server-defined dynamic intake forms; the doctor workflow; hosted-checkout payments.

Gallery AI | *On-device semantic photo search | Two-developer project, authored all ML features | 2025*

- Searched photos and videos by description fully offline: CLIP image and text encoders in TensorFlow Lite, a CLIP BPE tokenizer hand-ported to Dart, and inference in a long-lived worker isolate so the UI never blocks.
- Indexed libraries incrementally with an embedding cache keyed by file hash; added video search by frame sampling and Arabic queries via on-device ML Kit translation.

Foodly | *Food-delivery ecosystem, four Flutter apps and a Node.js API | Full-stack developer | 2025*

- Built customer, restaurant, driver and admin apps (383 Dart files) and the Node.js, Express and MongoDB REST API behind them (12 route modules, 10 Mongoose models).
- Designed an eight-state order lifecycle with driver dispatch that refuses double assignment, role-based JWT authorization, FCM notifications between roles, admin verification and commission reporting.

Mudhhila API | *Event-venue back office | Client project, sole backend developer | 2026*

- Built a Node.js, Express and MongoDB REST API for a Flutter client (events, instalment payments, expenses, JWT auth), with settlement status derived from the payment ledger and monthly, weekly and date-range reports computed in aggregation pipelines over compound and text indexes.

fashion_store | *Multi-role marketplace client over an ASP.NET API | Sole developer | 2026*

- Built a five-role Flutter client (97 endpoints) with refresh-token rotation and SignalR chat over long polling; wrote architecture-guard tests that fail when an endpoint event is never dispatched, hardcoded Arabic appears or locale files diverge.

TEACHING AND MENTORING

IT Instructor and Mentor | Aleppo, Syria — Oct 2018 – Present

- Taught Flutter, web development, algorithms and data structures to 1,000+ students through courses, hands-on workshops and tutorials.
- Mentored 20+ junior Flutter developers through code reviews, pairing and architecture walkthroughs; supervised 5+ senior graduation projects.

EDUCATION

M.Sc. in Software Engineering (in progress), Aleppo University — Apr 2023 – Present

B.Sc. in Software Engineering, Aleppo University | Ranked 12th in graduating class — Oct 2017 – Oct 2022

AWARDS AND LANGUAGES

Awards: Top 10, College Programming Competition; high rank, Syrian Collegiate Programming Contest (SCPC), two years

Languages: Arabic (native), English (professional working proficiency)
